PROFESSIONAL SUMMARY

Computer Science undergraduate (**9.83 CGPA**) and full-stack engineer who builds **production-deployed, secure, scalable systems** across the MERN stack, REST APIs and Python/FastAPI ML microservices. Delivered **FarmFresh**, a live multi-role AgriTech platform for **FPOs and CBBOs** with transaction-safe inventory, RBAC and audit logging, and, as **Core Integrations Lead**, a hybrid AI safety-triage system presented at **Smart India Hackathon (SIH) 2026**. **Trophy winner at the NIELIT AI Bootcamp**, Web Developer Intern (InAmigos Foundation), ISRO/IIRS-certified, with a strong **Data Structures & Algorithms, OOP and SDLC** foundation; seeking competitive software engineering internships.

EDUCATION

SRM Institute of Science and Technology — B.Tech, Computer Science and Engineering (CSE Core) *2025 – 2029 (Expected)*
CGPA: 9.83 Cumulative | Sem 1: 9.7 | Sem 2: 10.0 (Perfect GPA)

EXPERIENCE

Web Developer Intern — InAmigos Foundation *July 7 – 20, 2026*

- Completed a two-week web development internship for a nonprofit spanning front-end delivery, a live-site security/usability audit, and NGO-site UX design — earning a **Certificate of Internship**.
- Built the organization's official website end-to-end in **HTML5/CSS3**, sourcing and integrating imagery via the **Unsplash API** to give the site a polished, professional visual identity on a tight two-week timeline (Task 1).
- Conducted a **usability and security analysis** of the organization's live production site (inamigosfoundation.org.in), identifying a **spam link injection vulnerability** along with other usability issues and reporting them with remediation guidance (Task 2).
- Designed an annotated NGO website **redesign mockup in HTML/CSS** complete with **Figma import guidance**, translating UX recommendations into a developer-ready handoff artifact (Task 4).

TECHNICAL SKILLS

- **Languages:** C++, Java, C, Python, JavaScript (ES6+), HTML5, CSS3
- **Core CS Fundamentals:** Data Structures & Algorithms, Object-Oriented Software Design, Operating Systems (Process Management, CPU Scheduling, Memory Management, Deadlock Handling), Concurrency & Race-Condition Handling, Time/Space Complexity Analysis
- **Software Engineering:** SDLC, Requirements Analysis, REST API Design, Debugging, Manual/Functional Testing, Reliability & Performance Optimization, Logging/Audit Trails & Health Monitoring, Scalable Architecture, Technical Documentation
- **Full-Stack Development:** React.js, Node.js, Express.js, FastAPI, MongoDB/Mongoose, Prisma ORM, Redis, JWT Authentication, RBAC, Tailwind CSS, Vite
- **Tools & Deployment:** Git, GitHub, VS Code, Chrome DevTools, Cloud Deployment (Vercel, Render, MongoDB Atlas, Nginx, PM2)
- **Currently Building:** Advanced DSA in C++ & Java

ALGORITHMIC PROBLEM SOLVING

LeetCode — leetcode.com/u/atharv5492

- Solved **50+ problems** across **arrays, hashing, and bit manipulation** via a structured, pattern-based tracker (**Blind75/NeetCode150**-aligned) spanning C++ and Java — decomposing each problem, deriving a brute-force baseline, then refining toward optimal time/space complexity.
- Maintain a disciplined daily practice cadence while advancing through **Advanced DSA**, translating coursework theory into working, tested implementations.

PROJECTS

Oil Safety Intelligence — Hybrid AI Safety-Observation Triage System (Core Integrations Lead, SIH 2026) *React · Vite · Tailwind · Node.js · Express · FastAPI · MongoDB · Prisma · Redis* GitHub

- Led integration of a **two-layer triage system** for oil & gas incident and near-miss reports: a **regex rule engine** flags explicit hazards instantly, while a **Python/FastAPI NLP microservice** analyses multi-paragraph and multilingual (English, Hindi, Bhojpuri) reports to surface hidden **SIF precursors**.
- Engineered the **Node.js/Express backend and REST API**, a Layer 1/Layer 2 **routing pipeline**, Redis caching and a **normalizeReport()** layer mapping ML outputs (entities, **IOGP**-mapped rules, ~81–86% confidence) into a React dashboard with severity badges, filtering and explainability panels.
- Enabled **human-in-the-loop review** (override, audit trail, corrective actions); resolved large-dataset **Git/repo blockers** and diagnosed cross-machine confidence variance from model checkpoints and floating-point differences.

FarmFresh — FPO/CBBO Farm-to-Consumer Marketplace & Operations Platform (Team Head & Lead) *React · Node.js · Express · MongoDB · JWT · Redis* Live Demo | GitHub

- Led a team as **team head and lead**, architecting and deploying a **multi-role platform** (consumer, FPO admin/staff, CBBO/admin) with **22 data models and 14 REST modules**, **JWT + bcrypt auth with RBAC**, and an **Nginx + PM2** production setup on Vercel, Render and MongoDB Atlas.
- Built an **FPO operations centre** (farmer KYC, grade-based pricing, procurement plans, buyer demand, shipments, compliance, payouts) and a **CBBO network dashboard** with automated **inventory reconciliation** across FPOs.
- Engineered **transaction-safe inventory** via **MongoDB multi-document transactions**, a **cron-based eNAM/Agmarknet price sync with auto-pricing**, **Subscribe & Save**, a **QR traceability passport**, a **SHA-256 tamper-evident audit ledger** and **Bhashini multilingual UI**.
- Hardened security with a custom **WAF**, rate limiting, Helmet, fail-closed CORS, encrypted bank data and **private, audited KYC document storage**.

CERTIFICATIONS & ACHIEVEMENTS

- **Trophy — AI Bootcamp organised by NIELIT** : recognised for submitting an outstanding AI project.
- **IIRS-ISRO — "Climate Change Induced Disasters"** (June 2026): 5-hr course, 100% attendance. | **HackerRank — Java (Basic) Verified Skill Certificate** (July 2026)
- **DSA with Java (Alpha) — Apna College** (July 2026) | **GenAI Powered Data Analytics Job Simulation — Tata · The Forage** (June 2026)
- **Career Essentials in Generative AI — Microsoft · LinkedIn Learning** (June 2026): GenAI fundamentals, Copilot, Responsible AI.
