verma.atharv@gmail.com • +91 9599492763 • LinkedIn • GitHub • LeetCode • Portfolio

PROFESSIONAL SUMMARY

Computer Science undergraduate with a strong foundation in Data Structures, Algorithms, Object-Oriented Programming, and software engineering principles. Experienced across the full software development lifecycle — architecture, feature development, testing, deployment, and debugging — with a focus on scalable, maintainable systems and systematic problem solving. Maintains a 9.83 cumulative CGPA (Sem 2: 10.0, Perfect GPA) while shipping production-deployed, full-stack applications, completing an ISRO/IIRS-affiliated certification in climate-disaster analytics, and pursuing competitive technical internships.

EDUCATION

SRM Institute of Science and Technology — B.Tech, Computer Science and Engineering (CSE Core) *2025 – 2029 (Expected)*

CGPA: 9.83 Cumulative | Sem 1: 9.7 | Sem 2: 10.0 (Perfect GPA)

EXPERIENCE

Web Developer Intern — InAmigos Foundation *July 7 – 20, 2026*

- Completed a two-week web development internship for a nonprofit spanning front-end delivery, a live-site security/usability audit, and NGO-site UX design — earning a Certificate of Internship.
- Built the organization's official website end-to-end in HTML5/CSS3, sourcing and integrating imagery via the Unsplash API to give the site a polished, professional visual identity on a tight two-week timeline (Task 1).
- Conducted a usability and security analysis of the organization's live production site (inamigosfoundation.org.in), identifying a spam link injection vulnerability along with other usability issues and reporting them with remediation guidance (Task 2).
- Designed an annotated NGO website redesign mockup in HTML/CSS complete with Figma import guidance, translating UX recommendations into a developer-ready handoff artifact (Task 4).

TECHNICAL SKILLS

- **Languages:** C, C++, Java, JavaScript (ES6+), HTML5, CSS3
- **Full-Stack Development:** React.js, Node.js, Express.js, MongoDB/Mongoose, RESTful API Design, JWT Authentication, Tailwind CSS, Vite
- **Core CS Fundamentals:** Object-Oriented Software Design, Data Structures & Algorithms, Operating Systems (Process Management, CPU Scheduling, Memory Management, Deadlock Handling), Concurrency & Race-Condition Handling, Time/Space Complexity Analysis
- **Engineering Practice:** Git, GitHub, VS Code, Chrome DevTools, Debugging, SDLC, Manual/Functional Testing, Cloud Deployment (Vercel, Render, MongoDB Atlas), Technical Documentation
- **Currently Building:** Advanced DSA in C++ & Java

ALGORITHMIC PROBLEM SOLVING

LeetCode — leetcode.com/u/atharv5492

- Solved 50+ problems across arrays, hashing, and bit manipulation via a structured, pattern-based tracker (Blind75/NeetCode150-aligned) spanning C++ and Java — decomposing each problem, deriving a brute-force baseline, then refining toward optimal time/space complexity.
- Maintain a disciplined daily practice cadence while advancing through Advanced DSA, translating coursework theory into working, tested implementations.

PROJECTS

FarmFresh — Full-Stack Direct Farmer-to-Consumer Marketplace *React · Node.js · Express · MongoDB · JWT* Live Demo | GitHub

- Architected and shipped a production-deployed, two-sided marketplace eliminating middlemen from agricultural supply chains, engineering a complete MERN-stack system spanning authentication, role-based dashboards, and order fulfillment.
- Engineered a concurrency-safe ordering pipeline using atomic MongoDB update operations to eliminate race conditions on shared inventory, guaranteeing stock consistency under simultaneous requests without external locking.
- Designed a real-time demand-signal system via MongoDB aggregation pipelines, surfacing trending produce from live order data rather than static flags, alongside referential-integrity safeguards preventing deletion of listings with active orders.
- Implemented secure, stateless authentication (JWT + bcrypt) with server-enforced role-based access control, and a full simulated payment checkout flow, then deployed the decoupled frontend/backend architecture to production (Vercel, Render, MongoDB Atlas).

Nexa Bank — Banking Platform Front-End Architecture *HTML5 · CSS3 · JavaScript (ES6+)* Live Demo | GitHub

- Designed and developed the architectural backbone of a multi-page banking platform in vanilla JavaScript, building a stateful transaction engine that propagates balance updates consistently across concurrent account views.
- Built a component-driven, semantic HTML5/modular CSS3 layer to decouple presentation from business logic for long-term maintainability, achieving pixel-consistent rendering across 3+ browsers.
- Debugged layout-breaking edge cases across viewport sizes and browsers, establishing the structural foundation later extended into a full-stack (Node.js/database-backed) upgrade of the platform.

Banking Management System *C++ · Object-Oriented Design* GitHub

- Designed, developed, and debugged a terminal-based banking engine to solve a core extensibility problem: unifying divergent account behaviors without duplicating transaction logic, via a C++ inheritance hierarchy with a shared base class.
- Structured the class hierarchy for maintainability — onboarding a new account type requires extending a single subclass rather than modifying existing code — and performed manual functional testing across core transaction flows to verify balance accuracy.

CERTIFICATIONS

- **IIRS-ISRO — "Climate Change Induced Disasters"** (June 2026): 5-hr course on climate-driven disaster mechanisms, 100% attendance.
- **HackerRank — Java (Basic) Verified Skill Certificate** (July 2026): Core Java — syntax, OOP fundamentals, collections.
- **DSA with Java (Alpha) — Apna College** (July 2026): Structured DSA coursework in Java, alongside parallel C++ DSA practice.
- **GenAI Powered Data Analytics Job Simulation — Tata · The Forage** (June 2026): EDA, financial risk profiling, AI-driven delinquency prediction.
- **Career Essentials in Generative AI — Microsoft · LinkedIn Learning** (June 2026): GenAI fundamentals, Copilot, Responsible AI governance.
